

Abstract of the Disclosure

A cart for heavy folding tables facilitates the loading, folding, erection, and unloading of one or more conventional folding tables therefrom, by a single person without substantial effort by the person performing the operation. The present cart

5 includes a table receiving bed at such a height that a table tipped with its lower edge resting upon the base is slightly overbalanced toward the lower edge, with nearly all of the weight of the table still resting upon its lower two legs. The base of the cart includes a series of ridges forming pairs of notches for holding the lower edge of tables placed thereon.
